alerant

INFORMATION TECHNOLOGY INC.

Alerant Information Technologies, Inc. is a dominant member of the Hungarian corporate IT market, providing complete business solutions to its clients. It is mainly involved in the development, integration, implementation and support of Java-based (JEE) applications, and provides comprehensive support – starting from establishing the necessary IT background for business processes, up to building up a full corporate IT infrastructure utilizing a comprehensive technology. Therefore, in addition to application development and integration, guidance and consultancy forms an important part of its portfolio.

Alerant's core values are professionalism, flexibility and reliability. Our customers are large enterprises, mainly telecommunication companies and financial institutions, where IT systems must be capable of adjusting to quickly changing requirements in an up-to-date manner. Our priority is to create solutions that fully comply with and utilize the latest technologies, while being reliable and secure. As a result of the success we have had our customer base is steadily expanding. Apart from enterprises in the telecommunications and banking sector, we have established co-operation with a number of industrial companies and government organizations.

High level of expertise is the most important characteristic of Alerant activities. Though our employees have several years of IT experience as they had worked in comprehensive IT projects spanning several years, a great emphasis is placed on constant professional training. As a result, the ratio of certified experts is very high at our company when compared to the regional average.

As an acknowledgement of the high-quality work, Alerant received the ISO 9001:2000 certificate in 2004. The certification was carried out by the reputable SGS Hungária Kft. The certificate applies to Alerant's entire professional activities including large enterprise application development, software trading, and application support and consultation.

Alerant, founded in 2003, has been very dynamically expanding ever since, and reached the 2.8 billion HUF mark in revenues in 2008. A Central European market survey – Fast 50 – conducted by Deloitte put Alerant on the fourth place, and in 2006 the first place was reached in the 'Rising Star' category. On the 2008 EMEA survey of Deloitte – Fast 500 – Alerant was 27th.

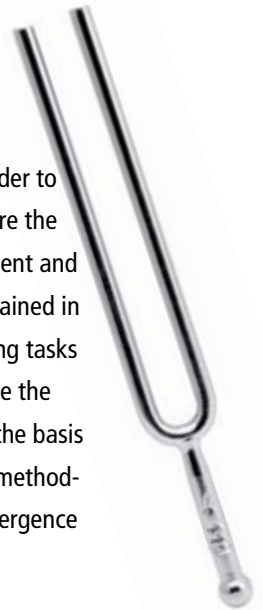

OUR SERVICES

Application Integration

Included in the infrastructure of a large enterprise there are normally 20-30 large and several hundred smaller applications using a variety of technological solutions. Problems may be encountered in terms of unified data usage or when different processes are connected or used jointly. The implementation of a new IT strategy that is built on the integration of applications helps to make the systems more transparent. Alerant develops a complex integration strategy for its customers, which provides solutions in connecting sub-systems and applications to one another, and in integrating new services into the legacy systems. We use state-of-the-art technological tools during implementation, the most important of which are SOA (Service Oriented Architecture), SOBA (Service Oriented Business Applications), ESB (Enterprise Service Bus), BPM (Business Process Management) and SDP (Service Delivery Platform).

Application Development

In today's market, it is essential for large enterprises to create ever new services in order to be able to quickly respond to changing requirements. Their IT development may require the deployment of the most modern technologies. Alerant performs the design, development and implementation of business solutions and applications by relying on its experiences gained in IT service support. In addition to project management, Alerant also performs consulting tasks throughout the entire duration of the development lifecycle. Alerant's activities involve the use of modern technology, development tools and methodology. Java/JEE represents the basis of our technology, while RUP (Rational Unified Process) serves as background to our methodology, using several special technologies, one of which is used to implement the convergence of telecommunication and IT solutions.

Consulting

The availability of experts with sufficient project experience in a given area is extremely important during the course of developing large enterprise JEE applications, especially in the design, kick-off and installation phases of the project. Alerant Inc. offers technological knowledge and assertiveness to its customers. Our colleagues have significant business experiences in the areas of telecommunication, banking systems and public administration. They have participated in numerous large-enterprise IT projects in different roles. Our professional experience ranges from individual application development to the formulation of application integration and consolidation strategies.

Support

Within the framework of this service we undertake to support the Java-based IT systems developed by us or a third party. Our experts give advice for creating the development and operation infrastructure, while our well-prepared support team is also available to receive calls 24/7.

Audit

Even the most carefully designed and built applications may have a developed solution that is not the most appropriate one for the given situation, or that does not fulfill the customer's expectations. We have created audit services to remedy such conditions and offer them both for ongoing and completed projects. Our colleagues review the given application and make recommendations for solutions ensuring the full utilization of opportunities inherent in the applied technology.

SPECIAL AREAS

Development and Operation of Service-oriented Architectures

Enterprises need flexible, transparent and manageable information technology infrastructure. This is the expectation that gave birth to the service-oriented infrastructure, where enterprise processes are built on re-usable services and implemented in a flexible environment, thus facilitating that constantly changing requirements are satisfied in a timely manner. However, SOA not only provides a technical solution, but organizational issues are also given great emphasis during its development and operation. Alerant offers full-range service portfolio in the fields of development, implementation and operation of service-oriented architectures. No matter what platform or technology is in place, Alerant provides support for building and implementing SOA architectures, for converting business processes into service oriented processes, for developing individual services as well as for operating already established infrastructures.

Business Rules Management

Enterprises have an enormous great number of business-and decision making rules. The majority of these are the same or just slightly differ from one another. If Business Rules Management System (BRMS) is used, these rules can be collected and managed in a central repository. BRMS tools play an extremely important role in SOA solutions development. By deploying them, business users can formulate and implement the rules and they it provides the ability for business analysts and rules managers to make decision planning transparent and manageable. Alerant offers overall support in relation with developing Business Rules Management solutions.

Enterprise Content Management

Most organizations serving a large number of clients already have some kind of central database, therefore access to basic and transactional data when serving a client is made possible. At the same time, the electronic management of documents related to clients and transactions is not provided in many cases. It significantly slows down business procedures, causes inconvenience to clients, and considerably burdens the organization, since it means extra work for the customer services and the administrative personnel. The content management solutions fully integrate to the infrastructure and existing systems of the organization, taking into account the quick and efficient service of the clients, as well as the broad support of the customer services and the administrative personnel. Alerant offers overall support in relation with projects aiming at developing e-business solutions. Our experts assist in surveying, redesigning the existing procedures of the companies and also give advice on developing the most suitable information technology infrastructure.

OUR PARTNERS

Oracle Hungary

Until BEA was acquired by Oracle – on 1 July 2008 – Alerant Inc. was an authorized Hungarian BEA technology and education center. From that point on Alerant is an Oracle Hungary partner for middleware solutions. Its certified instructors take part in facilitating Oracle Hungary middleware courses. Alerant provides various levels of support services to Oracle middleware products.

BCA Hungary

BCA Hungary offers overall consulting support in relation with developing business processes and SOA-based solutions. The main focus of the company's activities is the organization and processes management, as well as analysis of business processes and Business Process Re-engineering (BPR).

OUR ADDITIONAL PARTNERS

EMC

In case of solutions based on EMC Documentum, Alerant's experts undertake their implementation, configuration to the environment as well as application development tasks related to the introduction.

IBM-ILOG

Alerant offers overall support in relation with developing ILOG Business Rules Management solutions.

SOCIAL ROLE

Alerant Inc. believes that one of its important roles is to support domestic talents. As a silver grade sponsor, our company supported speed-trial motorcyclist, Gábor Talmácsi to successfully achieve his goals.
